## **Removal Of Washboard**

### **Problem Statement:**

Washboard corrugations on gravel roads create a major safety problem for the traveling public and increase roadway maintenance costs.

### **Solution:**

Remove washboards only in spring and fall when soil moisture conditions are higher, this eliminates the need for a water truck. Remove all loose aggregate and washboards without breaking the main surface crust by using a normal straight cutting edge on a motor grader.

### **Contact:**

Don Beard, Public Works Director
